

Rifle training setup for two shooters indoors

- **Safe** training anywhere
- **Efficient** tool to improve and sustain the shooting skill
- **Easy to use** by any shooter or instructor
- From basic training to advanced skill rehearsal
- Clear and easy to comprehend analysis and shot grading
- Immediate feedback from shots and series
- Portable system, built up in 10 minutes
- Standing and moving targets
- For military, law enforcement and security professionals

The Noptel Shooter Training System consists of suitable equipment and software for rifle shooting training in military and law enforcement training centres and units. The system allows safe training of shooting skills to be performed in accordance with used military and law enforcement marksmanship training standards.

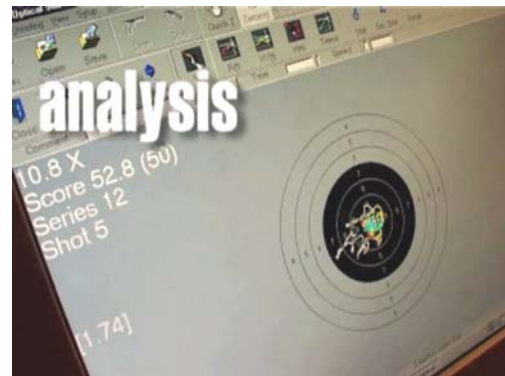

The system is an efficient tool to improve the shooting skill of any military and law enforcement professional and to keep it in the required level. The system helps to achieve and maintain sufficient readiness and self confidence that is required for proper use of weapons in field and urban operations.

IMPROVED SHOOTING SKILL

Rifle marksmanship training indoors

Noptel was the first company to introduce an optical training system for everyday use. Since 1982 we have supplied more than 10000 units to more than 60 countries. Noptel offers the latest technology and comprehensive training program based on years of experience with military and law enforcement users.

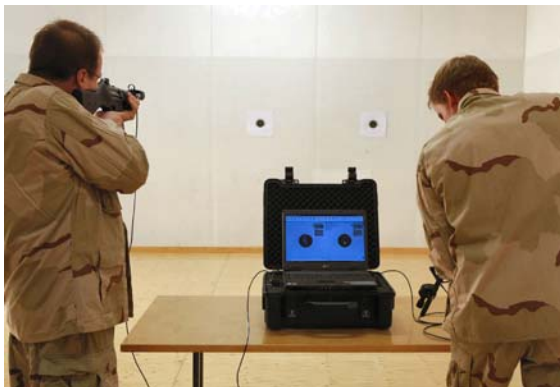

Indoor marksmanship training

Indoor training system allows training of practically all disciplines in a classroom. The shooter has the same difficulty level as in the real shooting. He will see the gun pointing path, hit point and grading of the shots in the computer display. This helps him to understand the basic shooting techniques and be prepared to live fire shooting.

Setup

Two shooters divide one PC, into which the optical units are connected. The instructor can observe the shooting of the shooters on the PC screen and can use it as a helping tool for the individual training.

Moving target training

The moving target training brings new elements to the shooting. The target can be programmed to operate in a certain time sequence. The target can be arranged to either pop-up or turning position. The shooter must make quick decision and action to hit the target. The shot (hits and misses) can be seen in the PC screen and the target turns when the shooter hits it showing the shooter that the shot was successful.

Equipment

The System consists of ST-2000 MilTrainer units, recoil systems, targets and spare parts. Training distance can be 10-50m. The units will be delivered in portable cases. The pneumatic recoil system gives recoil and allows semiautomatic function of the weapon. In the indoor training at 10 m distance the scaled targets are permanently on the wall of the classroom, one or several targets for each shooter. The target system can be pop-up or turning type.

Equipment:

- 2 x ST-2000 MilTrainer + accessories
- 2 x Recoil system + accessories (weapon related)
- PC (standard modern PC with 2 USB ports)
- 2 x moving target (upon user selection)
- 2 x P38 prism

Features:

- Portable and simple construction
- No special expertise needed
- User friendly operation
- Multi-language
- Efficient learning of shooting skills
- No costly after sales upgrades.
- Very low maintenance costs
