

Rifle training setup for two shooters out of doors

- **Safe** training anywhere
- **Efficient** tool to improve and sustain the shooting skill
- **Easy to use** by any shooter or instructor
- From basic training to advanced skill rehearsal
- Graphical presentation of hits and misses
- Immediate feedback from shots and series
- Portable system, built up in 10 minutes
- Normal size targets
- For military, law enforcement and security professionals

The Noptel Shooter Training System consists of suitable equipment and software for rifle shooting training in military and law enforcement training centres and units. The system allows safe training of shooting skills to be performed in accordance with used military and law enforcement marksmanship training standards.

The system is an efficient tool to improve the shooting skill of any military and law enforcement professional and to keep it in the required level. The system helps to achieve and maintain sufficient readiness and self confidence that is required for proper use of weapons in field and urban operations.

IMPROVED SHOOTING SKILL

Rifle marksmanship training at the shooting range

Noptel was the first company to introduce an optical training system for everyday use.

Since 1982 we have supplied more than 10000 units to more than 60 countries. Noptel offers the latest technology and comprehensive training program based on years of experience with military and law enforcement users.

Outdoor marksmanship training

Outdoor training system allows training of practically all disciplines safely at any outdoor range. The shooter can use the same shooting distances and environment as in life fire shooting. The shooting range can be arranged anywhere, where the trainees are. The shooter will see the gun pointing path, hit point and grading of the shots in the computer display. This helps him to better understand the effect of real environment in the shooting techniques and be prepared to successful live fire shooting.

Setup

Two shooters share one PC, into which the optical units are connected. The instructor can observe the shooting of the shooters on the PC screen and can use it as a helping tool for the individual training.

Real size targets

The target can be any normal real size target, which is used in the life fire shooting. The target is equipped with a prism unit, which is used as a reference for optical measurement. The targets can be exactly same as are used in the normal shooting sessions making the shooting training realistic.

Equipment

The system consists of ST-2000 MilTrainer units, recoil systems, target prisms and spare parts. Training distance can be 10-150m. The units will be delivered in portable cases. The pneumatic recoil system gives recoil and allows semi-

automatic function of the weapon. All shooters can shoot at the same target.

Equipment:

- 2 x ST-2000 MilTrainer + accessories
- 2 x Recoil system + accessories (weapon related)
- PC (rPC with 2-3 usb ports)
- 2 x 4P38 prism (200 m shooting)

Features:

- Portable and simple construction
- No special expertise needed
- User friendly operation
- Multi-language
- Efficient learning of shooting skills
- No costly after sales upgrades.
- Very low maintenance costs
